FARM PRODUCTION, DISPOSITION, CASH RECEIPTS AND GROSS INCOME OF TURKEYS 1945-49 *

May 1952

Revised estimates of farm production, disposition and income from turkeys are presented in this report for the years 1945-49. These revisions resulted from a review and analyses of the 1950 Census of Agriculture enumeration of turkeys on farms April 1 and turkeys raised during 1949 and of other available data relating to the production and disposition of turkeys. Revised estimates of breeder hens and all turkeys on January 1, 1945-50 also appear in this bulletin.

Turkeys Raised: These estimates are based primarily upon Census reports relating to turkeys raised in 1944 and 1949 adjusted in line with available records of market receipts, shipments, and assessors' enumerations. Annual changes are based upon indicated changes in numbers of turkeys on farms August 1 as reported by turkey producers, and upon the numbers raised as reported at the end of the year.

January 1 Inventory Numbers: Inventory numbers of turkeys on farms January 1, 1950 were based primarily upon the Census enumeration of turkeys on farms April 1, 1950 adjusted for changes in numbers between January 1 and the date of enumeration. A special survey was made in April 1950 to obtain information on this change in numbers. Annual changes in the estimates for intervening years are based on surveys of turkey growers.

Death Loss of Turkeys on Farms January 1: The estimates of the annual death loss of turkeys on farms January 1 for 1945 and 1949 are derived from the average per farm loss as reported by turkey producers, multiplied by the number of turkey farms enumerated by the Census. Annual changes are based upon changes in the average annual loss per farm as reported on February 1 each year adjusted to show changes in the number of turkey farms between Census enumerations. These losses represent the loss of breeding stock only, since losses of other birds on farms January 1 are insignificant.

Turkeys Produced: This estimate represents the net annual farm production of turkeys, computed from the number raised during the year, less the death loss of turkeys that were on hand at the beginning of the year.

Farm Consumption: Consumption of turkeys in the households of farm producers is estimated from a series of reports received annually from crop correspondents who report how many of their own turkeys are consumed in their households. The average consumption per turkey farm was multiplied by the estimated number of farms raising turkeys.

Sales: The annual sales are equal to the estimated production adjusted for inventory changes, less the consumption in farm households.

Prices: The average value per head of turkeys on hand January 1 is based upon the values reported by general reporters. The average annual price per pound of turkeys live weight is computed from monthly farm prices per pound and the estimated pounds of turkey sold each month.

Average Weight per Turkey Sold: The average live weight of turkeys sold is estimated from the average weights of turkey hens and toms sold during the year as reported by turkey producers at the end of the year.

Income: Cash receipts from turkeys are computed by multiplying the yearly total pounds of turkeys sold by the estimated average annual price per pound received by farmers. Gross income is cash receipts plus the value of turkeys consumed in farm households where produced. Turkey consumed at home is evaluated at the average annual farm price per pound.

---

* Prepared by E. Smith Kimball, Paul W. Smith and Robert F. Moore, Agricultural Statisticians, with the assistance of the State Agricultural Statisticians and under the general direction of A. V. Nordquist, Head, Division of Livestock and Poultry Statistics.
